

2.

Listing of Claims:

- 1 1. (Original) A container for a soap dispenser, the dispenser having a structure
2 that defines a recess, the container comprising:
 - 3 a) a hollow body adapted to fit within the recess;
 - 4 b) a projection for limiting movement of the body within the dispenser,
5 said projection extending outwardly from said body toward the
6 structure of the dispenser for selective engagement therewith.
- 7
- 8 2. (Original) The container of Claim 1, wherein said projection extends laterally
9 outward from said body.
- 10
- 11 3. (Original) The container of Claim 1, wherein said projection extends
12 longitudinally outward from said body.
- 13
- 14 4. (Original) The container of Claim 1, wherein said body includes a pair of
15 projections extending outward from said body in opposite directions relative
16 to each other.
- 17
- 18 5. (Original) The container of Claim 1, wherein said body has a longitudinal axis
19 and a second projection, wherein said projections are symmetrically located on
20 said body relative to the longitudinal axis.
- 21
- 22 6. (Original) The container of Claim 5, wherein said projections extend an equal
23 distance from said body.
- 24
- 25 7. (Original) The container of claim 1, wherein said projection has a laterally
26 extending surface oriented perpendicular to a longitudinal axis of said body.
- 27
- 28

3.

8. (Original) The container of claim 1, wherein said projection has a surface extending perpendicular to a lateral axis of said body.

9. (Original) The container of claim 1, wherein said projection has a surface extending parallel to a longitudinal axis of said body and a surface extending perpendicular to the longitudinal axis of said body, wherein said surfaces are adapted to engage the dispenser.

10. (Original) A container for soap comprising:

- a) a body having a top, a bottom, a front, a rear, and opposing sides connecting said top to said bottom and said front to said rear, said body having a longitudinal axis and a depth, wherein said body is made hollow to receive the soap;
- b) a pair of longitudinal projections extending outward from said body in a direction parallel to the longitudinal axis of said body;
- c) a pair of lateral projections extending laterally outward from said body;
- d) a pump attached to said body and in fluid communication therewith for selectively discharging the soap from said body; and
- e) wherein said pairs of projections are symmetrically arranged on said body relative to the longitudinal axis.

11. (Original) The container of Claim 10, wherein said longitudinal projections extend from a top surface of said body.

12. (Original) The container of Claim 10, wherein said lateral projections extend from opposite sides of said body.

13. (Currently Amended) The container of Claim 10, wherein said projections are located between said front and said rear of said body and have a depth of about one-half of [a] said depth of said body.
